

OUR COMPANY PHILOSOPHY

The vision - Where do we see ourselves in the long term?

As a provider for complex luminaire- and metal constructions we create high-graded solutions for technical and architectural areas of application and highest requirements. Our longtime experience allows us to coordinate projects holistically and systemically in terms of our customers and also see the big picture when it comes to answering complex questions.

We offer our customers light and form in perfection.

The mission - What is our job?

WELL THOUGHT CONSTRUCTIONS

Already during the development of our products we strive for the principle of downsizing: In close cooperation with the planners we design products with maximum performance and optimal use of technical scope – for the benefit of the project, the customer and the environment.

PRECISE PRODUCTION

Our technologically high-quality machinery enables the production of components for the highest demands. Short set-up times combined with maximum precision and many years of know-how are the basis for high-quality and sustainable products. Our metal production not only works for our own products, but also accepts contract manufacturing orders: for individual parts and assemblies according to your specifications.

GREAT DURABILITY

The combination of optimal material selection, intelligent design and innovative manufacturing methods results in products that are not only optimally suited for the respective area of application but are also designed for the longest possible service life. In the long term, this is good for both your wallet and the environment.

SAVING RESSOURCES

We minimize our CO2 footprint to a large extent by using our own photovoltaic system: not only for our high-quality machinery with comparatively low energy consumption, but also for our own production of laser cutting gas.

We do not manufacture disposable products: LMT lamps can be retrofitted again and again with new light sources and new lighting technology and are completely recyclable at the end of their service life. LMT is environmentally certified according to DIN ISO 14001.

The cornerstones - These are our corporate policy values:

CUSTOMER-ORIENTED

Our management system is designed to implement our customer's requirements on schedule through preventive error avoidance and to constantly improve ourselves.

ECO-FRIENDLY

We take responsibility for environmental protection for our products as well as for our suppliers, as far as our activities are affected.

INNOVATIVE AND FLEXIBLE

We achieve our claim of being "flexible, innovative and of the highest quality" through continuous development in all fields, particularly through further training of employees and the use of state-of-the-art production processes.

QUALITY MANAGEMENT

We commit ourselves to live the processes introduced within the quality management system, and to constantly improve them for the benefit of our customers. Compliance with all laws and standards is taken for granted in this context.

PARTNERSHIP AND SECURITY

We involve our customers, employees, and suppliers as partners into our development and manufacturing process.

Everyone in our company, whether they are managers or employees, is equally responsible for the quality of the products, because quality is produced.

It is always our goal to provide our employees with secure jobs and to counteract risks in a preventive manner.
