

Company Portrait of LMT Leuchten + Metall Technik GmbH

Company Profile

LMT Leuchten + Metall Technik GmbH – for over 40 years, our name has stood for high-quality platform and object lighting, as well as sophisticated metal constructions for projects all over the world. We develop and manufacture to measure, tailored to the specific requirements of the project and in close cooperation with architects, lighting designers and builders. Our customers benefit from our profound expertise and many years of experience right from the concept phase. Our innovative expertise, state-of-the-art production facilities and our production site in Germany are important guarantors for the precision and durability of our products.

Lighting Tubes

From simple lighting tubes to complex media channel systems – we offer a comprehensive portfolio in aluminium and stainless steel, for platform lighting as well as for countless other applications.

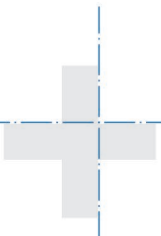

More than light

The LMT portfolio includes numerous standard products, as well as project-related individual developments for the highest demands and requirements. Specially designed aluminium extrusions form the basis of our systems, which stand out for their high degree of precision and durability. Alternatively, we also manufacture systems made of stainless steel. Our large selection of cross-sectional shapes, surfaces, light inserts and other components enables individual assembly and thus makes each media channel a unique piece.

Beyond their use for platform lighting, LMT media ducts are suitable for almost any application and environment, not only including distribution levels, corridors, pedestrian underpasses, staircases, multi-storey car parks, customs and toll stations, bus terminals and bridges, but also swimming pools and greenhouses. LMT media channel systems are not only popular in Germany.

Luminaires

LMT develops and manufactures project-related lighting solutions for individual and energy-efficient architectural lighting for indoor and outdoor use: for commercial and industrial properties, public buildings and facilities, retail stores and many more. Luminaires for technical applications complete our range.

Stand-alone or architecture-bound

Individual lighting solutions from LMT are always based on the design idea of the planner. Tailor-made for architecture and function, we develop lighting technology and design of each luminaire in dialogue with the client. If desired, the design and lighting effect can be assessed in real or virtual space and adapted to the project. In this way, we create solutions that conform to the mission statement for every lighting scenario, using our extensive pool of knowledge from the production of individual and series luminaires.

Metal Technology

In our company, a wide variety of metal products are created: the spectrum ranges from cladding and fixtures made to measure for interior fittings, to the contract manufacturing of assemblies and individual parts for medical technology, mechanical engineering and rail vehicles, and also includes art and design objects.

Variety and precision

Metal constructions are developed and produced at LMT not only for the company's own luminaires, but also for medical devices or object-related installations, for example. Our qualified team manufactures the individual components, assemblies and series parts using innovative technologies and state-of-the-art machines. In this way, we offer our customers precision and durability to the highest degree. Our comprehensive expertise in metalworking is also used in contract manufacturing.

From one single source

LMT develops the tailor-made solution for your lighting or metal construction project. From the first draft to installation on site, we turn visions into reality in a partnership dialogue with the customer – whether individual parts, complete solutions, series items or custom-made products are needed. A solution-oriented team of qualified employees occupies the interfaces 3D-CAD, simulation, prototype construction and series production.

LMT products are sustainable as a matter of principle: thoughtfully designed and precisely manufactured, they are durable and resource-saving. We minimise our CO2 footprint through the continuous use of in-house photovoltaics. LMT is certified according to ISO 14001:2015, ISO 9001:2015, DIN 1090, EN ISO 3834-2, and DIN EN 15085-2 CL1/P.
